

LOADED CARTRIDGES FOUND IN GARBAGE CAN

The discovery of loaded cartridges of the pattern used on active service in a garbage can by one of the garbage collectors recently occasioned much speculation when the matter was reported to the officials at the City Hall. The placing of the cartridges in the cans is thought to have been due to carelessness, however, and is not thought to have been mal-

ciously done by a 'German spy' or other alien enemy.

The request is made by City Hall officials that cartridges should not be put in any garbage cans. They would explode when placed in the incinerator furnace. The main danger, how-

ever, is that children might get hold of them, and while playing with them, the cartridges might be exploded and the children hurt.
