Letters of Interest +++++++++++++++

Editor Brandon Sun: Sir-I would like to congratulate

you in your stand on the releasing of interned aliens for farm work.

Would it not be better for the City Council to apply for permission to

use these men for the purpose of constructing a street railway track to the

Experimental Farm? It would be a

splendid opportunity for the city to get two miles of additional track at a very low figure. There is no question as to the desirability of extending the railway

that far as it must appeal to every-What could be nicer than a nice ride on a summer's evening to the . Farm? To the workers and the store and office help it would be de-

lightful. If Daylight Saving carries we would be able to have almost a half holiday any evening after working hours. The advantage to the city would be

great, as a large amount of money is spent by citizens out of the city, in an endeavor to find recreation by outings, etc. It is quite possible that with proper development, Brandon

might become a pleasure resort, and money brought here instead of taken Financially, I think the track, via

First street, would pay, not only for itself, but help to lift the burden of debt on the system now. Already there is considerable population on the route, and the Farm would attract

many visitors besides our own citizens. In reference to the need for farm help I would suggest that the city does not attempt any civic improvements whatever until seeding is over,

The farmers will thus be able to get their help and the city will be able to get the aliens to extend the track. Thanking you sir, I am an interested

thus freeing the men for farm help that generally follows city work.

Brandon, April 17th.

CITIZEN.
