

# Aliens Tunnel and Escape from Lethbridge Camp

---

**Six Germans Burrow Passage 110  
Feet Long and Make Good  
Their Escape**

---

Lethbridge, Alta, May 1—Six German prisoners have made a sensational escape from the detention camp here, tunnelling a passage four and a half feet under ground and one hundred and ten feet long, leading from the bunk house under the compound fence to the centre of the city nurseries adjoining the camp.

No trace of their whereabouts has yet been received though the Mounted Police are scouring the south country and watching the border.

The prisoners used implements stolen from the kitchen for the tunneling. They used a mine fan made by one of them for supplying them with air while tunneling, and made candles out of grease and tallow.

Each man who escaped carried a knapsack with provisions saved from the daily meals and stolen from the kitchen.

An investigation has been held by Major Birney in charge of the camp. He has frustrated many plots by the German prisoners. Only a few weeks ago two prisoners escaped by eluding the guards at night and crawling under fences.
